

Cover and Carrier Tape Extenders

Cover Tape Extenders

Cover tape extenders can be used with either paper or plastic carrier tape, punched or formed pockets, and any cover tape. We offer the extenders in either 16" or 20" lengths for use on any model tape feeder (except Mycronic/Mydata). They can also be used on all tape feeders with take up reels, pinch roller systems, or tape cutters.

Cover tape extenders are easy to apply by simply removing the protective tape, and then sticking the adhesive section to the end of the cover tape on the carrier tape. There are also seven different widths available, 4mm, 8/12mm, 16mm, 24mm, 32/44mm, 56mm, and 72mm.

Carrier Tape Extenders

Carrier tape extenders are an alternative to cover tape extenders and are used for carrier tape with no leader that needs to be started in a tape feeder. There are some feeders that can't use our cover tape extenders (Mycronic/Mydata), and these are an economical solution. They are also very popular with customers who are making their own "Mini Reels" of components for leader and trailer tape.

They come in 95 meter reels so you can cut exactly the length you need for your application. They are available in 8, 12, 16, 24, 32, 44, and 56mm widths, and uses antistatic black material with no pockets and heat sealed cover tape.
